Documentation

1 Create DualMap Grid:

If you already create grid, select it and choose **DualMap > Tilemap**

2 Dual Map System:

Main Map - grid holds tiles that are invisible to the player and serve as the logical or structural layer. Place on this grid tiles who you choose as **target** or **stair**.

Dual Map - based Main Map, the second grid — which is visible to the player - places its visual tiles, with a half-tile offset.

Target Main Tile - placed on the Main Map, and the Dual Map is built based on it.
Exclude Main - main tile is treated as a void, and the void is treated as the main tile.
Target Stair Tile - placed on the Main Map, and the Dual Map is built based on it.

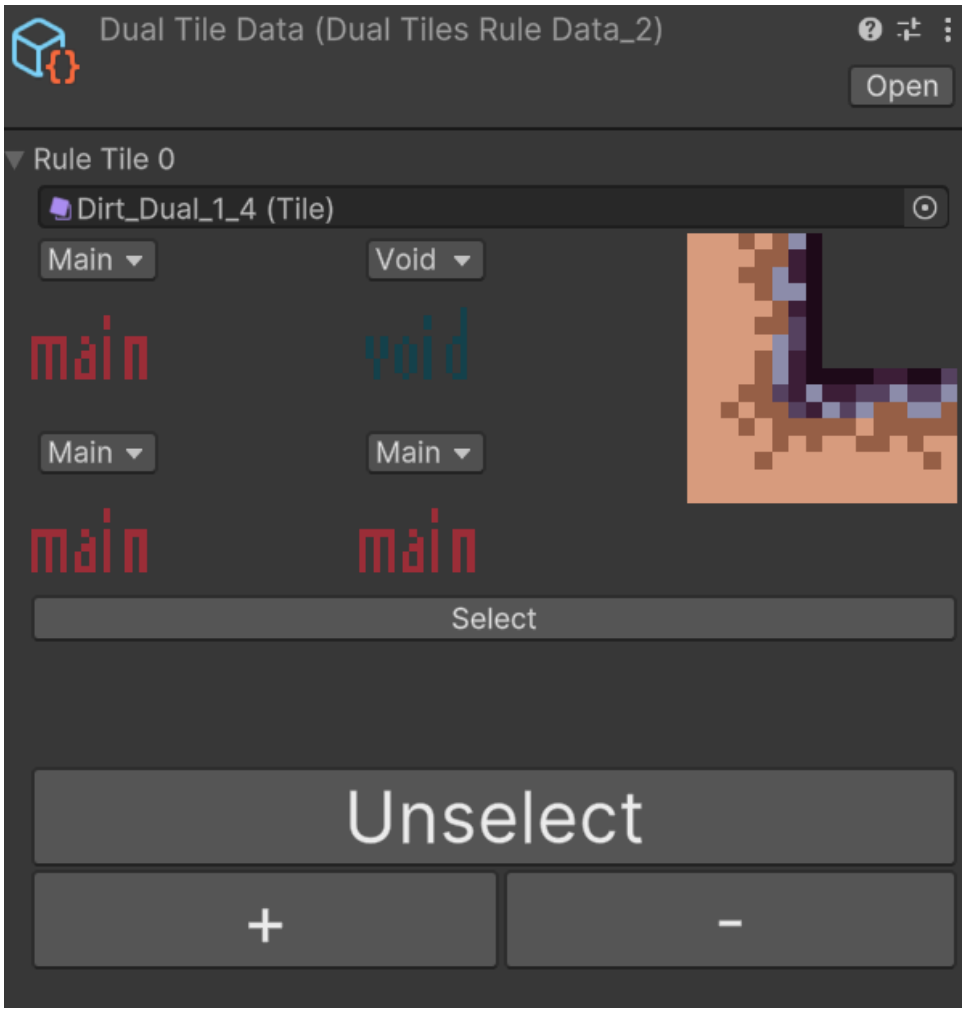

Bounds - area where work Dual Map;

Rule Tiles Data - set of rules on which the Dual Map is built.
Dynamic Update - determines whether the Dual Map is updated dynamically in the editor or not.

3 Rule Tiles Data:

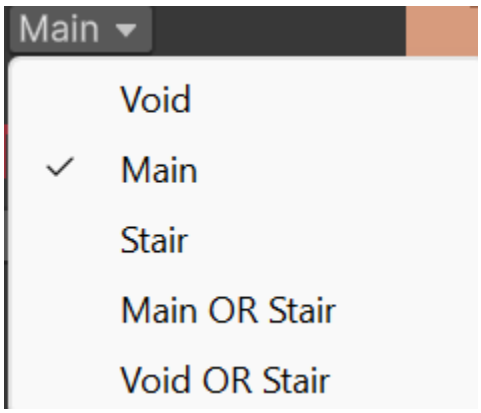

+ add the new Rule Tile or copy the selected tile.

- remove the last tile or delete the selected tile.

Stores the tile to be placed if the rules are met and rules.

Void - true if tile is missing.
Main - true if tile is Target Main Tile.
Stair - true if tile is Target Stair Tile.
Main OR Stair - true if tile is Target Main Tile or Target Stair Tile.
Void OR Stair - true if tile is missing or Target Stair Tile.
